

How can I get rid of the "toilet flushing" sound?

CleanUp! 4.x allows you to enable/disable sounds through the Options dialog.

CleanUp! 3.0 has available a way of disabling sound that is intended for advanced users only. Refer to the Help file for details. This is not made easily accessible through the normal Control Panel interface because I don't want CleanUp! leaving it's marks throughout the registry. An easier way of disabling this may be available in a later version of CleanUp!.

With CleanUp! 2.0 and earlier, there are several ways to do this:

- Turn the sound down on your computer.
- Disable the sound on your computer (click on the speaker in your task bar, then click on the mute check box).
- Disable the sound card (this is a slightly more advanced option).
