

## How do I get rid of the AutoComplete entries in forms when using Internet Explorer?

Right now you have to do this manually or use a tool like Private Eye to help you. CleanUp! does not do this. You can either delete individual entries or turn off auto-complete altogether.

Tip: You can delete individual AutoComplete entries by opening the drop-down list box, highlighting the entry you want deleted (using the up/down arrow keys, not the mouse), then pressing delete.
