

CleanUp! causes an invalid page fault when Windows restarts. How can I stop this?

In general, this problem appears to occur at an address something like 015f:0041da01.

See the answer to the question [CleanUp! hangs while cleaning the registry. What is wrong?](#) In general, such errors during restart can be safely ignored, although it would be best to fix them as described in the answer to the previous question.

For more information, refer to the article, [What to do about a Page-fault, Illegal operation, or Fatal exception Error.](#)
