

Is the OpenForecast project still "alive"?

Most definitely.

Now if you're wondering why there hasn't been a release lately that is a valid question. It is because the latest version in CVS - basically version 0.4 plus some minor enhancements - has met all of my individual needs. It is also stable enough to use in a production system - as many customers already are.

I would be interested in spending more time enhancing and further developing it, however I tend to devote the majority of my development efforts to the software projects that generate the most interest and revenue. For now, this is CleanUp!. Now if you'd like to change that then please send a donation to support further OpenForecast development by clicking the button below.[{snippet OpenForecastDonation}](#)
