

HDTV around the house

I recently had an article published in HomeToys eMagazine , a copy of which is available on the web site here. Though the subject matter is a little distant from the likes of CleanUp!, Index Dat Spy and Private Eye, it still utilizes my technology skills. If you're interested in HDTV then you should probably check out the article. I show how to distribute an HDTV signal - from any HD device - around the house to any HDTV. And all of this is done via inexpensive Cat5e cabling - the same kind used for computer networking and more modern in-house telephone wiring.
