Change HistoryVersion 2.1

- Improved support for Windows Vista.
- Modified to better handle unexpected "garbage" records (i.e. those that are not URL, HASH, LEAK, REDR, etc.) often seen under Windows Vista. Files like this previously would result in the message, "Failed to open document".
- In View Entry Details, a non-existent URL still displayed the label "URL: " followed by garbage.
- Bug fix (reported by [steve76063](#)): In View Entry Details, the Last Modified date and time were always the same as the Last Accessed date and time, even when they were different in the main view.
- Bug fix (reported by [steve76063](#)): In View Entry Details, the "Record Number" reported in the Details screen starts at 0 whereas the "No." on the main display starts at 1, so the Detail number is always 1 less than in the main view.
- Updated URL for support forum in the About dialog.
- New and improved installation program.
- User has the choice of language to use for installation. Supported languages include: English, French, Spanish, Portugese, Italian and German.
- Removed old-style Windows Help file. All support is now available through the Index Dat Spy web site.

- Modified About dialog to replace reference to Yahoo! groups with link to new forum.
