

CleanUp! 4.0 Download

This version of CleanUp!, version 4.0 is a major update over version 3.x. It has an updated interface and greatly enhanced options giving you more control over what CleanUp! does - and does not - clean. Additionally it adds support for Mozilla 1.x and Firefox 1.x browsers.

Note that if you are going to run CleanUp! 4.0 without first making a backup of your system, then it is strongly recommended that you do not enable the option "Scan local drives for temporary files" (just in case). Please consider making a \$3.99 donation before downloading this application by clicking on the button below:

File size: 318,775 bytes (311K).

Known issues/bugs:

- Under some - not all - configurations of Windows XP enabling the option "Scan local drives for temporary files" can result in some required system files being deleted. This has been identified as a problem for Microsoft Office 2003 users. [Solution: disable this option.]
- In Outlook Express (and possibly Outlook too), any folders containing a "." in the name get deleted when the "Delete Newsgroup Cache" option is enabled.
- While the executable may appear to run under Windows XP Professional 64 bit edition, some initial tests suggest a problem deleting needed files. Therefore do not attempt to run CleanUp! 4.0 under 64 bit Windows XP Professional. All 32 bit versions of Windows XP work fine.
- The list of cookies to keep is case-sensitive which may lead to some cookies being deleted when you'd expect them to be preserved. The solution for now is to pay careful attention to the case of the cookies. The next version of CleanUp! will provide a fix for this.

BY DOWNLOADING CLEANUP! YOU INDICATE THAT YOU ACCEPT THE TERMS AND CONDITIONS OF BOTH THE WARRANTY AND THE LICENSE AGREEMENTS.

Available from:

- Primary download site (setup program): CleanUp40.exe
- Primary download site (setup program, as a ZIP file): CleanUp40.zip (315,040 bytes)
- From the CleanUp! discussion list Files archive - if you're not already signed in, you will need to sign into Yahoo! first.
