

Private Eye Screenshots

The first image below is of the main Private Eye window showing a text entry from the Protected Storage. In this case, the entry shows the user name and password - not any real ones - entered into a test web page.

Â

Â

The following image also shows the main Private Eye window, but this time displaying binary data in the Protected Storage. The binary data is shown in the right-hand window in two formats: as hexadecimal data (a compact representation of binary data) and, where possible, as text characters. [Note that a "." is displayed if the character in that position is not a "printable" character.]

Â

Â

The following image shows the Private Eye About dialog for the free - unregistered - edition of Private Eye. The About dialog in the registered edition displays the registered user name and license key.
