

Is Windows CleanUp! Year 2000 compliant?

It is only as compliant as the operating system you are using. The base installations of Windows 95, Windows 98 and Windows NT 4.0 are considered "Year 2000 compliant with minor issues" by Microsoft. There are patches available for each of these operating systems to make sure they are totally Year 2000 compliant.

Since CleanUp! makes use of the standard Windows libraries it is only as Y2K compliant as your operating system. It has been tested under Windows 95 for Year 2000 compliance and works. The good news is that I have had no reports of any Y2K related issues with any version of CleanUp! - and we're now more than 4 years beyond Y2K (December 31, 1999).
