

Is Windows Private Eye Year 2000 compliant?

It is only as compliant as the operating system you are using. The base installations of Windows 98 is considered "Year 2000 compliant with minor issues" by Microsoft. There are patches available to make sure that it is totally Year 2000 compliant.

Windows ME, 2000 and XP are all Y2K compliant.

Since Private Eye makes use of the standard Windows libraries it is only as Y2K compliant as your operating system. The good news is that I have had no reports of any Y2K related issues with any version of Private Eye - and we're now well beyond Y2K (December 31, 1999).
